No significant leak in casing, tubing or packer: METHOD(S) USED: (A) TUBING-PACKER PRESSURE TESTS PROCEDURE: (1) Fill annulus with liquid and allow at least 2 hours for temperatures to stabalize (2) while injecting at maximum or average injection pressure, observe and record injection and annulus pressure. or liquid flow. (B) CASING-TUBING ANNULUS PRESSURE TEST PROCEDURE: (1) Top off annulus with liquid, if more than 100 gallons are required, allow at least 2 hours for temperatures to stabilize, (2) pressure annulus to at least 200 psi, (3) observe and record injection tubing pressure and annulus pressure simultanenously for at least 30 minutes. (Note: This test may be run while well is shut-in or injecting. If injecting, must maintain a minimum of 300 psi difference between injection and annulus pressures throughout the tubing length).
